Fujitsu, Accelitec Announce Integration of Contactless Transaction System with Core POS Platform

Accelitec's PayPilot System Is Seamlessly Integrated with Fujitsu's GlobalSTORE and CustomerCENTER Applications

FRISCO, Texas – Jan. 11, 2007 – Fujitsu Transaction Solutions Inc. and Accelitec Inc. today announced they have successfully integrated Accelitec's PayPilot™ suite of transaction solutions with Fujitsu's GlobalSTORE point-of-sale (POS) and CustomerCENTER loyalty applications. It is the retail industry's first seamless integration of a .NET-based contactless transaction solution with enterprise point-of-sale and retail loyalty marketing applications.

The integration of PayPilot with Fujitsu's and Microsoft's retailing solutions allows retailers to manage their preferred choices of payment types, to build upon their customer loyalty programs, and to enhance their customers' shopping experience. Customer transactions at the integrated POS can be tendered through automated clearing house (ACH), prepaid or stored-value, credit card and loyalty accounts via RFID-based technology embedded in cards, key tags and - increasingly - cell phones. This enables retailers to actively manage payment types to dramatically reduce the cost of transactions.

Leveraging Fujitsu's Pervasive Retailing™ Framework, the PayPilot solution uses RFID technology to link the consumer to various touch points in the store such as POS, self service kiosks, self checkout, mobile devices and more. As consumers opt-in to their retailer's programs, they will use the retailer-branded tags with embedded RFID chip to make their purchases, build their profiles, gather product information, and request a service in the store or on-line. The integration to Fujitsu's GlobalSTORE and CustomerCENTER represents the first of a series of planned innovations that combine the capabilities of RFID-based transactions with core retailing technologies.

The Fujitsu/Accelitec solution will be demonstrated in Fujitsu booth #1613 at the National Retail Federation's 96th Annual Convention and EXPO, Jan. 15-16 in New York City. Attendees can obtain a PayPilot key tag at the Fujitsu booth and experience contactless interactions on Fujitsu's TeamPoS 3000 POS terminal and self-service kiosk.

The solution also uses Microsoft Windows Mobile® to support near-field communication (NFC) with cell phones. Thus, Windows-based smart phones can perform contactless transactions. Because PayPilot is retailer-centric and not simply devoted to enabling contactless credit card transactions, there are many more customer-centric applications available to retailers that will greater leverage cell phones as next-generation customer interaction devices.

“The PayPilot/GlobalSTORE integration is a great example of how Fujitsu's Pervasive Retailing Framework is providing technical flexibility and business value for retailers and increased benefits for consumers,” said Scott Langdoc, chief technology officer (CTO) for Fujitsu Transaction Solutions.

“Accelitec's powerful software development kit gives POS developers the ability to quickly add new layers of contactless interaction to the application.”

“The PayPilot/GlobalSTORE solution brings speed, security and convenience to retailers and consumers alike,” said Tom Bartz, Accelitec CEO. “It provides more than just payments, and changes the ways that retailers can provide services to their customers while considerably cutting the costs of transactions at the same time.”

About PayPilot

PayPilot is an innovative retail solution that simplifies transactions, creates an enriched shopping experience and reduces costs. It expands the benefits of contactless payments and empowers businesses to positively change retailing across all channels at many touch points with their own brand and services. PayPilot enables consumers to opt-in, identify and connect with their chosen retailers with unparalleled security and peace of mind. PayPilot is offered by Accelitec, Inc., based in Bellingham, Wash. For more information, visit www.paypilot.com.

About Fujitsu Transaction Solutions

Fujitsu Transaction Solutions Inc., a wholly owned subsidiary of Fujitsu Limited (TSE: 6702), collaborates with retailing companies to relentlessly reduce their costs and facilitate consumer interactions that improve their profitability. Fujitsu's Pervasive RetailingTM approach enables companies to minimize the time, cost and risk of creating interoperability between disparate applications and devices that support a multitude of consumer touch points. Fujitsu's offering includes solution software, point-of-sale store technology, U-Scan self-checkout systems, self-ordering systems and multi-vendor lifecycle services. Customers include Canadian Tire, Chevron Corporation, Hallmark, Hannaford Bros., H-E-B, Kroger, Loblaws, Nordstrom, Payless ShoeSource, PetSmart, Regal Cinema, Ross Dress for Less, Staples, Stop & Shop and The TJX Companies, among others.
